

Asbestos

Did you know?

Asbestos is found in some older buildings (insulation, tiles) and rarely in some consumer products. Breathing in asbestos fibers can lead to serious health issues such as lung cancer.

Action Plan

- If you are concerned about asbestos in your home, hire a certified inspector.
 - If asbestos-containing materials are in good condition and cannot be reached by kids, it may be best to leave them alone.
 - If materials are damaged or renovations are planned, hire a certified asbestos contractor and make sure all safety regulations are followed.
- Avoid using talc-containing products (talc may be naturally contaminated with asbestos).
- If you work with asbestos (construction, demolition, brake repair): Shower and change clothes/shoes before you drive home. Do not wash work clothes with household clothes.
- Don't smoke cigarettes. In people exposed to asbestos, smoking greatly increases the risk of getting lung cancer.

Did You Know?

Parents can request a school's Asbestos Hazard Emergency Response Act (AHERA) plan, which explains how the school safely addresses asbestos in the building.

If you are doing work in your home and come across asbestos, make sure your contractor is asbestos certified. To learn more, visit health.ny.gov and search "asbestos information for contractors."
