

Did you know?

Extreme heat days are becoming more common as the climate gets warmer. Athletes are vulnerable to heat-related illness and dehydration particularly when they train in the middle of the day.

Action Plan

□ Keep cool:

- During high heat days, reschedule training to mornings or evenings when it is cooler.
- Wear light-colored, lightweight clothing, and use sunscreen (sunburn makes it harder to cool down).
- □ **Keep hydrated:** On hot days, drink more fluids than you usually would even if you don't feel thirsty. Take frequent water breaks.
- □ **Recognize the signs of heat stress:** warm skin, headaches, dizziness, muscle cramps and nausea.
 - Keep an eye out for these symptoms in teammates.
 - Ease into practices (acclimatize) during heat season.

Signature

• If signs appear, stop activity and rehydrate in shade or A/C.

Resources

Learn more about the risks of heat exposure for athletes: visit <u>cdc.gov/disasters</u>, select "Extreme Heat," and click "Athletes."

Learn more about the signs of heat acclimatization (changes or adaptations that occur in response to heat stress): visit <u>ksi.uconn.edu</u>, select "Prevention," and click "Heat Acclimatization."

For more resources regarding extreme heat safety:

- <u>health.ny.gov</u> and search "Extreme Heat Advice"
- <u>nysphsaa.org</u>, select "Ads and Coaches," and click "Safety-research." Scroll down to "Heat Index Procedures."
