

## Radon

### Did you know?

*Radon exposure increases your risk for lung cancer, stomach cancer, and leukemia.*

### Action Plan

- Test your home, especially if you live below the third floor. Install a radon reduction system if high levels are detected.

Avoid using areas with high levels of radon for sleeping or play until you fix it.

- Have new homes tested for radon before moving in. This includes homes built to be resistant to radon.
- Do not smoke. Radon increases your risk and your family's risk of lung cancer, especially if you are a smoker.
